

Vishnu Payyannur Thotten

Senior Backend Engineer · Dubai, UAE

vishnupavithra@gmail.com · github.com/vishnuptdev · linkedin.com/in/vishnu-pavithran

PROFESSIONAL SUMMARY

Senior Backend Engineer with 10+ years building and scaling production backend systems.

Track record of designing high-performance APIs, optimizing database and query performance at scale, and owning multi-tenant API platforms and real-time data infrastructure end-to-end.

Extends the same engineering discipline to LLM-based systems, measuring retrieval quality, cost, and latency, and building AI tooling that fits real developer workflows.

CORE SKILLS

Languages & Frameworks: Python, FastAPI, Flask, Django, Django REST Framework, Go

Databases: PostgreSQL, MySQL, Redis, ClickHouse, pgvector

APIs & Architecture: RESTful API Design, Microservices, System Design, Database Optimization, Performance Tuning

AI / LLM: Retrieval-Augmented Generation, LLM API integration (OpenAI, Anthropic, Ollama), LLM evaluation & benchmarking, LLM-powered developer tooling, MCP servers

DevOps & Tools: Docker, Kubernetes, Linux, CI/CD, GitLab, Nginx, Celery, RabbitMQ, PyTest, Jira

PROFESSIONAL EXPERIENCE

Senior Backend Engineer — Trasna (formerly Workz)

Dubai, UAE · 2022 – Present

- Drive technical direction across the backend stack; manage GitLab releases and Docker deployment pipelines across all services.
- Build and maintain backend services in FastAPI and Flask with PostgreSQL and Redis, expanding into Go for new services.
- Core contributor to eIM (GSMA SGP.32) systems, implementing protocol message parsing and handling for IoT remote SIM profile management.
- Own 8+ backend services end-to-end, including a ClickHouse data pipeline with change-data-capture replication and monitoring, improving data reliability and observability across environments.
- Designed and built prgate, an internal LLM-powered pull request review tool that judges diffs against team-committed rubrics and posts inline review comments with full audit logging (rubric version, findings, tokens, cost, latency) — cutting manual review time and reinforcing coding standards.

Software Developer — Classyserve Technologies

Kerala, India · 2018 – 2022

- Built and maintained RESTful APIs with Python and Django REST Framework, powering production-grade web applications.
- Owned relational database design and query optimization across PostgreSQL and MySQL, improving performance under load.
- Containerized applications with Docker, built CI/CD pipelines, and used Celery for asynchronous background processing.

Junior Software Developer — Bizotic

Kerala, India · 2016 – 2017

- Developed and supported Python/Django web applications, implementing client- and server-side validation and resolving production issues with senior developers.

Web Developer — Infotech OneZero

Kerala, India · 2014 – 2016

- Built responsive web applications with HTML, CSS, JavaScript, and PHP; improved search engine optimization and handled ongoing client maintenance.

PERSONAL PROJECTS

corbzy.com — <https://corbzy.com>

Live production web toolkit with a Go backend, built and operated solo.

Stack: Go

docmind

RAG service with async ingestion and a measured evaluation harness.

Stack: Python, FastAPI, pgvector, Redis, MCP

superman

Zero-dependency Go CLI that routes AI coding tasks between a cheap local model and a capable guide model.

Stack: Go, Ollama, OpenAI-compatible APIs

llm-gateway

Go reverse proxy unifying multiple LLM providers behind one API.

Stack: Go

EDUCATION

B.Tech in Computer Science and Engineering

Vimal Jyothi Engineering College — Kerala, India · 2009 – 2013
